PROFESSIONAL SUMMARY

Full-stack Software Engineer with 4+ years of experience building and delivering Web Applications using React, Angular, Node.js, and Backend Systems Google Cloud, AWS and Salesforce. Known for picking up new technologies quickly, communicating clearly with both technical teams and non-technical stakeholders, and seeing features through from requirements to production. Experienced in Agile methodology, collaborating closely with product managers, Business Analyst, QA, and End Users through Brainstorming Demos, Regular Demos and Feedback Loops. Dedicated to End-to-End Ownership from Root Cause Analysis through Full Resolution while fostering team efficiencies through active peer mentoring and collaborations.

SKILLS

Programming languages: Java, TypeScript, JavaScript, Python, C/C++, Go

Full stack: Angular, React, React Native, Node.js, Express.js, Redux, GraphQL, REST API, Swagger, Spring Boot, Django, Bootstrap, Linux

Databases and cloud: PostgreSQL, MySQL, MongoDB, DynamoDB, AWS, AWS S3, Salesforce (Force.com), Google Cloud Storage, Cloud Firestore

Data Engineering & Data Formats: Apache Airflow, PySpark, Snowflake, AWS Glue, Databricks, ETL pipelines, Parquet, JSON, XML, CSV, .mov, .mp4, .avi

Salesforce.com Admin: Health Cloud, Education Cloud, Experience Cloud, Financial Service Cloud, Service Cloud, Non-Profit Cloud, Salesforce Sites, Workflow Rules, Flows, Approval Process, Role Hierarchy, Profiles, Permission Sets, Sharing Rules, Organization-Wide Defaults (OWD), Field Level Security, Page Layouts, Lightning App Builder, Custom Objects, Validation Rules, Custom Metadata Types, Salesforce HEDA

Salesforce Development: Apex Classes, Apex Triggers, Batch Apex, Scheduled Apex, Apex Test Classes, Lightning Web Components (LWC), Aura Framework, Visualforce pages and Controllers, SOQL (Salesforce Object Query Language), SOSL (Salesforce Object Search Language), Named Credentials, Connected Apps.

Analytics and visualization: Tableau, Power BI

AI/ML Tools: Claude, Gemini, GitHub Copilot, Microsoft Copilot

Development tools: Git, GitLab, GitHub, Jenkins, Bitbucket, Postman, Bash, Lucid chart, Eclipse, VS Code, IntelliJ, Jest, Jasmine, Karma

Engineering & Software Development Practices: Agile, Waterfall, Sprint Planning, Story Point Estimation, API Documentation, Cross Functional Collaboration, User Acceptance Testing, Deployment, Post Production Support, CI/CD pipelines

Productivity Tools: Atlassian Jira, Confluence, ServiceNow MS Teams, Office 365, Slack, SharePoint, Google workspace

EDUCATION

Master of Science, Major: Computer Science (AI and Cloud Computing)

January 2023 - December 2024

University of Texas at Arlington, GPA: 3.8/4.0, Event organizer for on-campus placements

Bachelor of Technology, Major: Computer Science and Engineering

June 2016 - May 2020

GITAM University, GPA: 3.6/4.0, Served communities voluntarily

WORK EXPERIENCE

Software Engineer, SkillzDepot (Early-stage Ed-tech Startup)

Farmers Branch, TX

Employee Onboarding Platform

February 2025 - Present

A structured employee onboarding platform delivering sequential video-based learning modules with AI-generated study materials and assessments, tracking user progress centrally to ensure consistent onboarding across the organisation.

Highlights:

- Designed and implemented a locked progression system in React and Node.js where users can only access the next module after completing the current module's assessment, ensuring structured learning and higher content completion.

Role and Responsibilities:

- Collaborated with the Product Manager to clarify requirements, participated in sprint planning to break features into **Jira** stories with effort estimates, and ensured the team was aligned on scope and dependencies before each sprint began.
- Built reusable **React components** including a progress bar, assessment form, and video player used across all module pages to keep the codebase consistent and reduce duplication.
- Built REST APIs using **Node.js** and **Express.js** to handle module content delivery, user progress tracking, and assessment submission, ensuring all business logic was handled on the backend.

- Integrated **Claude API** into the Node.js backend to automatically generate study material from uploaded transcripts and store the result in **Cloud Firestore**, so users always receive pre-generated content without triggering any additional API calls.
- Stored module videos in **Google Cloud Storage** and maintained all structured data including transcripts, study materials, user progress, and assessment results in Firestore, serving video content to users via secure **signed URLs** that expire after one hour to prevent unauthorised access.
- Wrote unit tests using **Jest** for Node.js services, and streamlined the regression testing cycles for react frontend by collaborating with the QA for each release.
- Managed feature branches in **GitHub**, resolved pipeline failures in **GitHub Actions**, and handled environment variables using **GitHub Secrets** across QA and Production environments.
- Conducted stakeholder demos after each release, gathered feedback, and raised bugs or change requests as Jira tickets to be addressed in the next release.

Environment: React 18, React Native, TypeScript, Node.js, Express.js, Cloud Firestore, Google Cloud Storage, Claude API, GitHub, GitHub Actions, Jest, Jira, Microsoft Teams.

Senior Software Engineer | ABSYZ

Telangana, India

J-1 Sponsorship Program | International Student Exchange Program Organization

March 2022 - January 2023

A modernisation of a legacy application for an International Student Exchange Program, replacing outdated forms with a web-based UI built in React and TypeScript, allowing students and sponsors to complete and submit multi-stage forms online with all data saved directly to Salesforce.

Highlights:

- Contributed to building a shared React component library including buttons, forms, input fields, modals, and tables, used consistently across all form pages to reduce duplication and maintain a uniform UI throughout the project.
- Wrote Apex test classes for Salesforce backend controllers achieving 90% code coverage, ensuring all backend logic was tested before each production deployment.

Role and Responsibilities:

- Analysed existing form workflows to identify field changes and added new validations, and re-designed the updated form architecture in **React** and **TypeScript**.
- Developed multi-stage J-1 participant and sponsor forms in React with field-level validations and built document upload functionality in sponsor forms
- Designed and developed a confirmation email notification to the user upon successful submission of the form
- Connected the React frontend to Salesforce using a pre-configured **Connected App** to authenticate form submissions and save data directly to Salesforce upon form completion.
- Conducted code reviews and pair programming sessions, explaining React component structure and Salesforce integration patterns to support junior engineers during their onboarding and day-to-day assignments.
- Wrote **Apex test classes** for Salesforce backend controllers and coordinated with the QA team before each release.
- Built **CI/CD pipelines** using GitHub Actions to automate build, test, and deployment of React builds to Salesforce Static Resources across QA and Production environments.
- Monitored production systems after each deployment, tracked issues in **Jira**, and provided regular status updates to stakeholders during weekly status meetings, actively involved in **Retrospective** meetings and recommended process improvements.

Environment: React 18, TypeScript, Salesforce, Apex, OAuth 2.0, GitHub, GitHub Actions, Jira, Confluence, Microsoft Teams.

Digital Transformation of Annual Audit Process | Engineering and Construction Company

November 2021 - March 2022

Digitally transformed the organization's annual audit process by replacing manual, paper-based procedures with an automated system, reducing errors by accelerating completion timelines.

Highlights:

- Identified and fixed Angular performance issues that caused slow page loads by analysing component behaviour using Chrome DevTools, resulting in 25% faster load times.

Role and Responsibilities:

- Reviewed process documentation in **Confluence**, collaborated with the team to define goals, break down tasks, and allocate responsibilities before creating Jira tickets.
- Designed a scalable Salesforce data model by designing objects with standardized schemas and parent-child relationships.

- Implemented **Role-Based Access Controls (RBAC)** to enforce strict data governance and security.
- Configured **Scheduled jobs** in Salesforce to automatically create annual audit records to send auditors a one-time form link via email, allowing them to fill and submit the audit.
- Built a six-stage audit form in **Angular** with field-level validations and stage dependency, enforcing sequential stage completion.
- Integrated **DocuSign** to sequentially route submitted audit data through three approvals for their e-signature and at the same time, distributed the final signed document to all approving authorities in a pdf format.
- Wrote **Apex test classes** to validate Salesforce backend logic and wrote unit tests using **Jasmine** and **Karma** for Angular to test field validations, service methods, ensuring code coverage before each deployment.
- Participated in daily standup to report progress, prepared and delivered bi-weekly client demos using sandbox data, and obtained stakeholders sign-off throughout the project iterations.

Environment: Angular, TypeScript, Salesforce, Apex, DocuSign API, OAuth 2.0, Jasmine, Karma, GitHub, GitHub Actions, Jira, Confluence, Microsoft Teams

Legacy Website Modernization | Engineering and Construction Company (IW)

April 2021 - November 2021

A full redesign of IW's website, migrating from an outdated, hard-to-maintain React version to a modern, modular tech stack, achieved better system performance and scalability.

Highlights:

- Diagnosed slow page load issues in the legacy React codebase by profiling component behaviour in Chrome DevTools, identified unnecessary re-renders as the root cause, and refactored affected components to deliver 25% faster load times.

Role and Responsibilities:

- Planned the migration from **React 16** to **React 17** with **TypeScript**, independently developed and migrated 20+ pages and components including the navigation bar, footer, and multi-level sub-menu structure, resulting in a cleaner and more maintainable codebase.
- Contributed to build a **shared React component library** which is used consistently across all pages to reduce duplication and maintain a uniform UI throughout the project.
- Owned and resolved **Salesforce** backend trigger issues that were affecting data calculations.
- Configured Salesforce **workflow rules** to automate email confirmations upon form submission to job applicants thus reduced manual follow-ups.
- Wrote **Apex test classes** and achieved over 95% code coverage.
- Coordinated with the QA team on regression and cross-browser testing before each release.
- Participated in daily standup to report development progress. Organized client demos to showcase newly developed or updated pages after each release.
- Managed version control using **GitHub** by creating feature branches and merging changes into the main codebase.

Environment: React v16.0, React v17.0, TypeScript, Salesforce, Apex, GitHub, GitHub Actions, Jira, Postman, Microsoft Office 365.

Software Engineer | ABSYZ

Telangana, India

Student Admission Portal | Student Portal Platform

September 2020 - April 2021

A step-by-step application platform enabling students to explore a university's course catalogue and apply to programs aligned with their academic interests and goals.

Highlights:

- Developed Apex batch jobs and classes and strictly followed the **best practices on governor limit** that enabled process large volumes of student data by eliminating prior synchronous failures thus improving system throughput and stability.

Roles & Responsibilities

- Worked on **Salesforce HEDA** architecture to manage educational data, supporting student course admissions and ensuring accurate data flow across the system.
- Built a custom application form using **Aura components** and **JavaScript** on the frontend, implemented backend logic in Apex, and stored all submission data directly in Salesforce.
- Implemented **Lightning Data Service (LDS)** and applied performance best practices to enhance application speed, scalability, and responsiveness.
- Developed and extended Salesforce functionality using **Apex classes, triggers**, and batch jobs, addressing the client's unique operational and custom requirements.
- Integrated **payment gateways** to supports multiple payment options to submit the course application fee

- Diagnosed and resolved complex backend bugs and website issues, optimized system performance and improved its reliability.
- Partnered directly with the client via daily 9-to-5 Slack calls, leveraging real-time communication to gather requirements and drive development.
- Created and executed more than 50 test cases for backend functionality, ensuring bug-free deliverables.
- Configured Salesforce automation features, including **Flows** to automate routine tasks such as email notifications and course assignments, improving operational efficiency.
- Managed end-to-end deployment using **Salesforce Change Sets**, coordinated client approvals, and demonstrated components to ensure accuracy before production release.
- Worked with cross-functional teams to interpret client requirements and deliver tailored, timely solutions.

Environment: Apex classes, Apex triggers (for Salesforce DB), batch jobs, Salesforce Higher Education Data Architecture (HEDA), Version management (Change Sets), Aura, JavaScript, Lightning Data Service, Slack, Office 365

Software Engineer | Pena4

Andhra Pradesh, India

Hospital Billing & Revenue Cost Analytics and Reporting

May 2020 - September 2020

Designed and implemented a scalable AWS-based data pipeline to ingest and process Charge Description Master (CDM) data from hospitals nationwide, presenting analytics through Snowflake dashboards to identify billing gaps and support cost reduction initiatives.

Highlights:

- Gained hands-on experience building an AWS data pipeline using S3, Glue, and Lambda to ingest and process billing data from various hospitals.

Role and Responsibilities:

- Worked closely with senior engineers and architects to understand the billing data structure and consolidate raw data in CSV format from on-prem systems.
- Developed **AWS Glue** ETL jobs using **Python** to move CSV formatted files from on-prem systems into S3, performing data cleaning tasks including handling null values, correcting column types, and removing duplicate records.
- Configured **AWS Lambda** functions to automatically trigger the data pipeline when new files arrived in S3, eliminating manual intervention.
- Monitored **AWS CloudWatch** alerts to track pipeline failures and errors, and escalated issues to the support team to maintain stable operations.
- Loaded cleaned datasets from **AWS S3** into Snowflake using **Snowpipe** for continuous data ingestion, ensuring data was accuracy, mapped to the target tables.
- Collaborated with business analysts and wrote **Snowflake SQL queries** to calculate billing statistics per department per hospital and helped customer service to identify billing gaps.
- Built Dashboards in **Tableau** to display the billing statistics generated using SQL.

Environment: AWS Glue, AWS Lambda, AWS S3, AWS CloudWatch, Snowflake, Snowpipe, Tableau, Python, SQL, CSV, Jira, Office 365.

PROJECTS

AI Travel Companion: Built with React and Vite that helps users plan trips through conversational guidance, covering flights, hotels, packing, weather, and cost estimates via the Claude API.

Distributed File System: Implemented a distributed file system in Python with client-server architecture supporting upload, download, delete, and rename operations across networked nodes

Sentiment Analysis on Movie Reviews: Analyzed 3 ML models (CNN, BERT, NLP), processing 10,000+ reviews and achieving 95% classification accuracy across genre and rating categories.
