

PROFESSIONAL SUMMARY

Full Stack Software Engineer with 4 years of experience owning the complete request lifecycle from React UI through Node.js REST APIs to PostgreSQL, across enterprise SaaS, AI platforms, and healthcare data systems. Skilled in microservices architecture, OAuth security, CI/CD, and cloud infrastructure on AWS, with a consistent track record of shipping reliable, high-throughput systems at scale.

SKILLS

Programming Languages: Java, TypeScript, JavaScript, Python, C/C++, Go
Full Stack: React, Node.js, Express, Redux, GraphQL, REST API, Swagger, Spring Boot, Django, Bootstrap
Databases & Cloud: PostgreSQL, MySQL, MongoDB, DynamoDB, Snowflake, AWS S3, Lambda, Salesforce, Glue, EC2, Docker, Kubernetes
Tools & Practices: Git, Jenkins, Bitbucket, Confluence, Jira, CI/CD, System Design, Unit Testing, Code Reviews, TensorFlow
AI Tools: Claude, Gemini, GitHub Copilot, Microsoft copilot
Engineering Practices: Agile, Waterfall, Sprint Planning, Story Point Estimation, Unit testing, Debugging, API Documentation, Code Reviews, Cross Functional Collaboration, Testing, Deployment, Post Production Support

EDUCATION

Master of Science, Major: Computer Science	Jan 2023 - Dec 2024
University of Texas at Arlington, Arlington, TX, GPA: 3.8/4.0, Graduate Teaching Assistant, Event organizer for on-campus placements	
Bachelor of Technology, Major: Computer Science and Engineering	June 2016 - May 2020
GITAM University, GPA: 3.6/4.0, Served communities voluntarily	

EXPERIENCE

Software Engineer, SkillzDepot, Remote, USA	Feb 2025 - Present
- Developed AI workflow features across React and Node.js with server-side module unlock validation and Google Cloud Storage progress tracking to enforce sequential task completion, improving task completion by 38% and cutting API error rates by 27%. - Optimized the REST API by batching requests and implementing server-side caching, reducing API call volume by 27% and response time by 40ms per interaction across module loading and questionnaire processes. - Architected Docker-containerized Node.js microservices for user authentication and session management with retry logic and Jest test suites, improving service reliability by 31% and eliminating regression defects by 26%. - Designed and implemented CI/CD pipelines using GitHub/GitHub Actions, automating build, and deployment stages with branch-based release strategies (test/QA/prod), enabling zero-downtime deployments and reducing release cycle time by 40%.	
Senior Software Engineer, ABSYZ, Hyderabad, India	Sep 2020 - Jan 2023
- Spearheaded full-stack features for enterprise applications serving 10,000+ users across React, TypeScript, and Node.js, building REST APIs with Salesforce data integration, driving a 30% rise in form completion rate and cutting UI defect reports by 25%. - Engineered an end-to-end OAuth 2.0 authentication system spanning React login flows, Node.js token middleware, and JWT-secured REST API endpoints, cutting partner onboarding time by 40% and improving cross-system data accuracy by 28%. - Refactored React class components to functional components with hooks while co-optimizing API payload size and PostgreSQL query plans, achieving 25% faster load times for datasets exceeding 50,000 records. - Delivered Java and TypeScript microservices for core business workflows with 90%+ unit test coverage, integrating CI/CD test gates that reduced production incidents by 30% across all service endpoints.	
Software Engineer, Pena4, Andhra Pradesh, India	May 2020 - Sep 2020
- Deployed cloud-native, fault-tolerant AWS data ingestion pipelines (S3, Lambda, Glue) to process large-scale healthcare datasets, reducing data preparation effort by 35% and improving pipeline refresh reliability by 30%. - Streamlined Snowflake and DynamoDB query pipelines with automated schema validation and data integrity checks to catch malformed records before reporting, eliminating 25% of manual audit overhead and reducing reporting defects by 25%. - Optimized PostgreSQL query execution plans, indexes, and data access layers for high-throughput analytics dashboards, reducing median query response time by 35% and improving large-scale dataset aggregation performance by 40%.	

PROJECTS

AI Travel Companion: Built with React and Vite that helps users plan trips through conversational guidance, covering flights, hotels, packing, weather, and cost estimates via the Claude API.

Distributed File System: Implemented a distributed file system in Python with client-server architecture supporting upload, download, delete, and rename operations across networked nodes

Sentiment Analysis on Movie Reviews: Analyzed 3 ML models (CNN, BERT, NLP), processing 10,000+ reviews and achieving 95% classification accuracy across genre and rating categories.
